DIALOG SERVICES

Architecture

Interior Design

In 2007 DIALOG was selected as the Prime Consultant for the International Facilities Project at YYC, providing full architectural design services, full interior design services, sustainability consultants and coordination of all external sub-consultants.

The \$1.67 billion facility is designed primarily for international and trans-border traffic with connections to the domestic terminal. The terminal includes a centralized multi-level check-in and pre-board screening areas, retail areas, airline lounges and a state-of-the-art baggage handling system. It is designed to handle YYC's projected passenger growth, reaching as many as 27 million passengers by 2035.
